application

Online
connection

Intuitive user
interface

Automatic cup
dispenser

Suitable for both
reusable and
disposable cups

450

capacity up to 450 beers per hour

RevolMatic

The automatic beer dispenser RevolMatic is the perfect solution where quick and smooth tapping is needed. It is used both in recreational facilities (aquaparks, zoo, amusement parks) and for larger events like festivals, concerts, and football games.

Fully Automatic System

- > The turntable places the beer cups directly under the mobile dispensing nozzle and fills them with fresh cold beer. Since RevolMatic has an automatic cup dispenser for up to 100 plastic cups, the pin runs smoothly and continuously. RevolMatic is flexible: it can work with both reusable and disposable cups.

Performance: Up to 450 beers per hour

- > RevolMatic refills the cups with a dedicated dispensing hose. This increases the speed without producing too much foam. Thanks to the fully automated draught beer system, the quantity in each cup is identical.

63 x 46 x 54cm

Small, mobile, user-friendly

- > RevolMatic can be connected to any common cooling system. Thanks to the low net weight of 18 kg, the device can be easily transported from one point of sale to another. Even unskilled personnel can operate the device easily.

Connected with the Internet

- > The RevolMatic dispensers can be connected to the Internet so the data are visible on the tablet, laptop or smartphone. You can check the volume of the sales, the beer temperature and the cooling water temperature.

Autonomous beer draft points

- > Automating serving cups, pouring beer and the use of contactless payment technology in RevolMatic devices translates into a reduction in the number of staff necessary to operate catering stands. Selling has never been so easy! The customer chooses the right amount of beers, then pays, and after accepting the payment, RevolMatic serves the order. Equipping RevolMatic with a contact-less payment system makes ordering, paying, and collecting beer hygienic and to a high degree minimizes the risk of spreading viruses and bacteria.

Smart Touch

The machine has a touchscreen to set speed and volume and with an app you are able to check your data via smartphone or tablet.

TECHNICAL SPECIFICATION

Features and Benefits		General Properties		Technical Details	
Fully automatic system	Automatic cup dispensing	Up to 450 beers/hour	Connected to the Internet	Small, mobile, user-friendly	Robust housing
Modes	Settings	Cooling	Connectivity	Central web-based control	
1) Automatic mode for plastic cups	Cup capacity, nozzle-height, serving speed	Input and output connection for standard cold circuit	Internet (LTE)	All important information from every beer stand visible on the computer, tablet, laptop or mobile phone	
2) Manual mode for glass cups					
Power input	Power consumption	Power cable			
12 VDC	60 W	2 m			
Measures and Weight					
Dimensions	63 x 46 x 54cm (height x width x depth)				
Net weight	18 Kg				
Supplied Accessories					
External power adapter (standard power network)	Input:	100-240 VAC, 1.5A			
	Output:	12 VDC - 5A			
FOB	Foam on Beer-Detector				
Design Elements					
Housing	Stainless steel				
Display	4.3" touchscreen				
Components	Certified components for gastronomy				
Connections					
Standard	John Guest connections				

Patent pending
